

*Traditional washers mechanically sluice dirt off cases but have a tendency toward blind spots, and even high-pressure jetting cannot remove the grey tenacious film known as milk stone or static soil. This static soil can only be effectively removed with the aid of ultrasonics.*

*This new Ultrasonic Case Washer, available from Cannon, achieves a new all-time high level of cleanliness for plastic cases by utilizing ultrasonic sound. In this unique system, time, temperature, detergent and mechanical energy each contribute to remove dirt (including static soil) from every surface of the case.*

## **The dairy case washer of the future is available today from Cannon.**

The Ultrasonic Case Washer meets today's sanitation demands by achieving a previously unattainable level of cleanliness while reducing:

- Energy and Detergent Usage
- Operating and Drying Costs
- Maintenance Time
- And Much More

It accepts cases situated on their bases or inverted and thoroughly sanitizes them at a rate in the thousands-per-hour range.

The case washing system of the future is *indeed* available today. For complete details on this exciting new product call Cannon Conveyor Systems at 1-800-825-8501.
